

Titanic Dataset Visual Report

Data Dictionary

Variable	Definition	Key
survival	Survival	0 = No, 1 = Yes
pclass	Ticket class	1 = 1st, 2 = 2nd, 3 = 3rd
sex	Sex	
Age	Age in years	
sibsp	# of siblings / spouses aboard the Titanic	
parch	# of parents / children aboard the Titanic	
ticket	Ticket number	

fare	Passenger fare	
cabin	Cabin number	
embarked	Port of Embarkation	C = Cherbourg, Q = Queenstown, S = Southampton

Variable Notes

pclass: A proxy for socio-economic status (SES)

1st = Upper

2nd = Middle

3rd = Lower

age: Age is fractional if less than 1. If the age is estimated, is it in the form of xx.5

sibsp: The dataset defines family relations in this way...

Sibling = brother, sister, stepbrother, stepsister

Spouse = husband, wife (mistresses and fiancés were ignored)

parch: The dataset defines family relations in this way...

Parent = mother, father

Child = daughter, son, stepdaughter, stepson

Some children travelled only with a nanny, therefore parch=0 for them.

After visualization of titanic data set here are some insights:

- ❖ **38%** of passengers survived.
- ❖ **3rd class** had the most passengers, with the **lowest survival rate**.
- ❖ **Women and higher-class passengers** were more likely to survive.
- ❖ **Higher fares** were linked to **higher survival chances**.
- ❖ Most passengers were **young adults** (20–30 years), and **many traveled alone**.
- ❖ **Strong indicators of survival: Sex, Pclass, and Fare.**
- ❖ **Visualizations** confirmed that class and gender played a key role in survival.
